Title: Online Movie Rental Service

Description: An interface that allows for users to rent movies or television shows online for a given period of time.

Actors: admin, customer

Functionality:

1. Customers can sign up.
2. Customers can log in.
3. Customers are able to input their payment method.
4. Customers are able to select which movie or television show they want to rent.
5. Customers are able to specify how long they want to rent the media for (might be dependent on API used, or how I get around the API).
6. Customers will lose access to their media after their rental period.
7. Admins will be able to add or remove movies and television shows.
8. Customers can log out.

Stretch Functionality:

9. Admins can ban customers for violating terms of use.
10. Admins can see statistics.
